Cloud Application Design

Harnessing Productivity

Once businesses subscribe to Cloud services, they can host customized internal applications online – allowing their entire workforce to access them from around the world. The rise of automation and AI offers businesses new opportunities to reimagine how employees work. Simple but crucial daily tasks which keep the gears of a company turning can now be automated.

Hosting customized applications on the Cloud is the most cost-effective way to streamline business processes and automate routine data entry.

Reimagining Task Flow

When an employee shifts their attention back and forth between tasks, they inevitably compromise the quality of their focus. Automating data entry for payroll and accounting empowers employees to concentrate on core business and utilize their attention to think creatively: applying innovative solutions to company challenges while mechanical tasks are automatically resolved.

Transparency

Too often, employees and managers alike rely on email threads and spreadsheets for HR functions such as absence requests, reimbursement applications, and time sheets. Convolved digital and paper trails are difficult to manage, especially for overseas offices. This, in turn, can lead to an increased likelihood of fraudulent activity and unaccounted funds.

Cloud-based applications which streamline these HR functions create a clear and simple window which employees and managers can access anywhere in the world instantly.

Insight

When a company manages its data through a simple, single point, this same data can yield valuable insights into the health of the company. Dezan Shira develops applications which visualize raw company data into graphs, charts, and infographics, allowing businesses to take important decisions based on the most up-to-date information available.

DEZAN SHIRA & ASSOCIATES

Your Partner for Growth in Asia

Technology

Cloud Application Design

How We Can Help

Office Automation Design

- Develop applications to share files across offices and countries;
- Automate business processes (payroll or accounting data entry);
- Streamline absence management, reimbursement applications, and time sheet management.

Power BI Report Design

- Convert company tax, payroll, and HR data into visualized insights about the company's growth trajectory and pain points;
- Deliver these insights to company regularly;
- Design a customized 'dashboard' for company which automatically loads new Power BI analytics.

Post-Deployment Support

- Provide employee training to minimize regular workflow interruptions and ensure benefits of Cloud migration are fully realized.

Cloud Server Maintenance

- Manage subscribed cloud service, providing system setting changes and account maintenance.

IT Helpdesk

- Provide remote and on-site support.

Why Dezan Shira & Associates

Dezan Shira & Associates combines technological proficiency and local knowledge in advising and assisting clients with IT systems in Asia. The practice has a dedicated IT team that is experienced in providing cost-effective solutions for traditional IT infrastructure, Cloud computing applications, and enterprise resource planning (ERP) systems. Our team is able to tailor its services to a wide range of business goals after further consultation.
